

Stage Wings

The ASI stage wing option consists of two solidly machined extender wings that can be securely bolted onto ASI's precision automated stages. The stage wing option allows micromanipulators, like the MM-33 unit shown here, to be easily and securely attached to the top plate of the stage. This allows the micromanipulator to be moved in both the X and Y axis with the sample. The stage wing option also allows other devices such as perfusion tubes or Stereotaxic equipment to be securely attached to the stage.

The standard wings have 1/4 – 20 threaded holes on one-inch centers.
Metric versions are available with M6 x 1 threaded holes on 25 mm centers.
